React – Ex8 – SPA

Ex 1

Create a "wizard application" which consists of 4 stages :

Stage 1 : "Welcome page" with a button "Start" that will navigate to stage 2

Stage 2 : A display with a FORM containing 2 text boxes for providing "First name" & "Last Name" and a button "Next" that will navigate to stage 3 only if the "First Name" which is mandatory has been supplied.

Stage 3 : A display with a drop down for selecting the city and a button "Next" that will navigate to the last stage (stage 4)

Stage 4 : A display that will present all the data provided so far.

Ex 2

Implement a "Master-Details" flow with SPA as follows :

The Main page will contains a view that presents all the users names pulled from

https://jsonplaceholder.typicode.com/users as links.

Each link click will "redirect" to another view that presents the user's name, email address & city
